## Alligator Wrench

So-called because of its shape (like an alligator's mouth). Others may know it as a Goat Wrench or an Always Ready Wrench. Historically it was used to turn iron and steel pipes and rods which could not be turned with a regular wrench. A pipefitter often used such a tool in fitting or removing air and water-piping from a locomotive.

Today, we're reintroducing this versatile tool to the industry with ability to accommodate metric and SAE sizes in hex and square nuts with an automatic ratchet like action. Included on the handle are 3/8 thru 5/8 inch (9.52 mm thru 15.8 mm) thread restorers and a built-in hammer.

- ▶ The opening is equivalent to a 9/16 (14 mm) thru a 1-1/8 inch (28 mm) wrench.
- ▶ 12 in. (304.8 mm) long by 3 in. (76.2 mm) wide
- ▶ Made from forged steel
- ▶ Chrome plated finish to fight corrosion

The GMP Alligator Wrench will be the first tool you reach for when you need that "one tool fits all".

P/N 70451 Weight: 1 lb. 7 oz. (.65 kg)

## B Ratchet Wrench

Offered in two different sizes, these handy box-style wrenches are the tools to have when assembling or mounting splice and terminal cases, lashing wire and ground clamps. Each is plated with a bright nickel finish to fight corrosion.
