

### Split Cable Feeders

These feeders give you the same tough construction as our standard feeders with the added benefit of dividing in half for fast, easy removal without needing an end of the cable.

- ▶ All exposed edges of both the 90 in. (228 cm) Main Split Feeder and 36 in. (91 cm) Extension Split Feeder have a protective plastic coating protecting the cable and user
- ▶ The series of latches allows for easy opening and closing of both the body and ends of the feeders

This style of feeder is ideal for pre-connectorized cables to avoid having to cut and splice the cable to remove the feeder.

These are also an excellent idea for particularly long runs of cable allowing "figure-8 types" of installation. Pull-in a portion of your cable in one direction from a mid-point, remove the feeder and the remaining cable on the reel, set up in the other direction with the second cable end and finish the pull.

P/N	Description	Weight
88830	4 in. x 90 in. Split Main Cable Feeder	38 lbs. (17 kgs)
88831	4 in. x 36 in. Split Ext. Cable Feeder	23 lbs. (10 kgs)
